NORTH TEXAS ASSEMBLIES OF GOD

GPD

Growth-Plateau-Dcline is determined by the rate of growth over the previous five years. A total attendance growth of 10% or more equates to a growing church. A total attendance decline of 10% or more equates to a declining church. Those how growth rate is between +10% and -10% are considered plateaued.

GPD	Growing	Plateaued	Declining	Plateaued & Declining
North Texas	52.1%	17.6%	30.2%	47.9%
SC Area	49.7%	18.5%	31.8%	50.3%
National	48.6%	17.5%	33.9%	51.4%

MEAN

The Mean is the average church size and is calculated as Sunday AM Attendance / # of Churches Reporting.

MEAN	2025	2024	2023	2022	2020	2015	2010	2005	2000	1995	1990	1980
North Texas	179.7	174.3	157.6	146.1	141.7	149.4	144.9	125.6	118.3	104.6	113.9	107.0
SC Area	166.2	158.4	145.1	133.5	124.9	146.1	138.3	126.3	120.8	110.8	116.8	108.0
National Average	159.9	153.8	145.1	135.5	135.4	152.1	153.1	142.8	135.5	129.5	128.6	126.3

MEDIAN

The Median is the Sunday AM Attendance of the midpoint church, so in a district with 125 churches, the midpoint church would be the 63rd church, so the Median would be the Sunday AM Attendance of that church. While there are ways to increase the size of the Median church that don't indicate existing church growth (closing small churches, gaining large churches through transfer, etc.), an increasing Median would generally indicate growth.

MEDIAN	2025	2024	2023	2022	2020	2015	2010	2005	2000	1995	1990	1980

CHURCH HEALTH METRICS

Metrics, such as those provided below, are designed to measure effectiveness, health, and overall contribution to Christ's kingdom.

In the charts below, your district's five church health metric calculations are compared to two different groups.

Region: This comparison measures church health metrics across the district's geographic or language region.

National: This comparison provides the church health metric for the U.S. Assemblies of God.

1. MISSIONAL EFFECTIVENESS: the AC ratio

The **AC** measures our worship attendance against the number of conversions or salvation decisions our efforts produce. This ratio demonstrates the local church's missional effectiveness. Rather than measuring attendance alone, the **AC** reveals the degree to which our efforts to connect with people and lead them to faith in Christ are being effective by calculating how many of us it takes to produce a new believer each year. In a healthy church, the **AC** of a local congregation will likely be 5.0 or lower.

AC (x < 5.0)	2025	2024	2023	2022	2020	2015	2010	2005	2000	1995	1990	1980
North Texas	4.2	4.2	4.6	5.0	5.4	2.8	4.4	4.3	2.8	3.9	4.7	8.1
SC Area	3.5	3.5	3.6	3.9	4.7	3.2	4.3	4.5	3.7	4.2	5.3	6.5
National Average	3.5	3.7	3.8	4.3	5.1	4.1	4.3	3.9	3.4	4.0	4.6	5.5

2. ASSIMILATION: the CW ratio

The **CW** identifies the salvation decisions solidified by the act of water baptism by taking the total number of conversions for the year and comparing that number with the water baptisms reported that same year. A **CW** of 1.0 would mean that we baptized the same number of people as made conversion decisions. The **CW** can be used to help us measure the health of our assimilation efforts. A low **CW** indicates that the church is maintaining connection to its converts long enough to guide them toward the choice to be baptized. A high **CW** indicates that we aren't baptizing a good percentage of our converts. It seems a good target for the **CW** would be 3.0 or lower.

CW (x < 3.0)	2025	2024	2023	2022	2020	2015	2010	2005	2000	1995	1990	1980
North Texas	2.7	2.8	2.7	2.9	2.9	4.8	2.9	3.3	4.8	4.1	4.0	2.0
SC Area	2.8	2.9	3.1	3.4	3.4	3.7	3.3	3.4	3.8	3.7	3.3	2.1
National Average	3.1	3.1	3.2	3.3	3.6	3.5	3.6	3.8	4.1	3.8	3.5	2.1

3. GROWTH: the AW ratio

The **AW** measures the number of water baptisms against our average worship attendance. Since most of our churches require new members to be converted and baptized, this ratio can help us see our potential for membership growth. Yes, transfer growth can give us new members and not positively affect this ratio, but the **AW** demonstrates a local church's actual contribution to kingdom growth. If a church's **AC** should be below 5.0 and the **CW** should be less than 3.0, the **AW** should be less than 15.0.

AW (x < 15.0)	2025	2024	2023	2022	2020	2015	2010	2005	2000	1995	1990	1980
North Texas	11.4	11.7	12.4	14.4	15.5	11.8	12.9	14.4	13.5	16.2	19.0	16.0
SC Area	9.8	10.4	11.3	13.1	15.9	11.7	14.0	15.2	14.0	15.7	17.7	13.8
National Average	11.1	11.6	12.2	14.0	18.7	14.5	15.3	14.8	13.7	15.2	15.9	11.7

4. DISCIPLESHIP & MOBILIZATION: the CS ratio

A **CS** ratio compares conversions with Spirit baptisms and can help us measure both discipleship effectiveness and our efforts to mobilize our Spirit-filled saints. It would seem that our **CS** should be 4.0 or less since that would mean ¼ of our converts are being baptized in the Holy Spirit. At the same time, a **CS** below 3.0 would indicate that we are struggling to mobilize the Spirit-filled people in our church. So a healthy **CS** would likely fall between 3.0 and 4.0. So, if our numbers are outside those parameters, we can identify whether we have a discipleship problem or a mobilization problem.

CS (3.0 < x < 4.0)	2025	2024	2023	2022	2020	2015	2010	2005	2000	1995	1990	1980
North Texas	4.9	4.9	4.3	3.8	2.9	7.4	4.5	4.7	4.4	4.3	4.1	2.7
SC Area	6.3	5.9	6.0	5.6	4.7	6.6	5.1	4.9	4.4	4.4	3.7	2.9
National Average	6.6	6.3	5.9	5.6	5.5	6.0	5.1	5.1	5.5	4.9	4.2	3.2

5. REPRODUCTION: the AS ratio

As we did with water baptism, we can combine attendance and Spirit baptism numbers in an **AS** ratio. By measuring Spirit baptism against average worship attendance, we can measure the reproduction of Spirit-filled disciples taking place in the congregation. Our collective efforts to continue pursuing Christ's worldwide harvest in the future hinge on the continued reproduction of Spirit-filled believers.

AS (15.0 < x < 20.0)	2025	2024	2023	2022	2020	2015	2010	2005	2000	1995	1990	1980
